**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to an apparatus, classified in class 156, subclass 345.48.
- II. Claims 16-34, drawn to a method, classified in class 438, subclass 758+.
- III. Claims 35-38, drawn to a gas injector, classified in class 156, subclass 345.33.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I, and II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the controlling of the flow rate of the process can be done by hand.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the apparatus does not requires a gas injector comprising an injector body which includes at least first and second gas

inlets, at least first and second gas passages, and at least first and second gas outlets, the first gas passage being in fluid communication with the first inlet and first outlet, the second gas passage being in fluid communication with the second inlet and second outlet, the first and second gas passages being discrete from each other so as to provide independently adjustable flow rates of gas through the first and second outlets. The subcombination has separate utility in another apparatus such as in a microwave or parallel electrodes apparatus.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for one of the Groups is not required for any of the other Groups, restriction for examination purposes as indicated is proper.

A telephone call was made to Peter Skiff on 10/21/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
